

# DO KHYI COIN

## WHITEPAPER

**The mightiest meme coin  
in the world!**

## INTRODUCTION

Do Khyi Coin – The mightiest meme coin for real-world impact!

The Do Khyi Coin (DKC) has arrived. Inspired by the legendary Tibetan Mastiff, this meme coin blends strength, loyalty, and a powerful community. While other meme coins bark, Do Khyi Coin stands guard—not just over portfolios, but over dogs in need.

Meme coins come and go, but true strength endures. Do Khyi is more than a coin—it's a symbol of resilience in a chaotic crypto world, turning every trade into tangible help. Our primary mission is simple: support dog shelters with real funding for food, medicine, transport, and emergencies.

Do Khyi Coin (DKC) is a decentralized, transparent, and fair token on Solana. With a standard 1% fee and a one-time 2% early-sell fee (first 60 minutes per wallet) flowing 100% to the Shelter Wallet, DKC is designed for sustainable liquidity, protection against manipulation, and long-term, measurable impact—all tracked with public wallets and monthly reports.

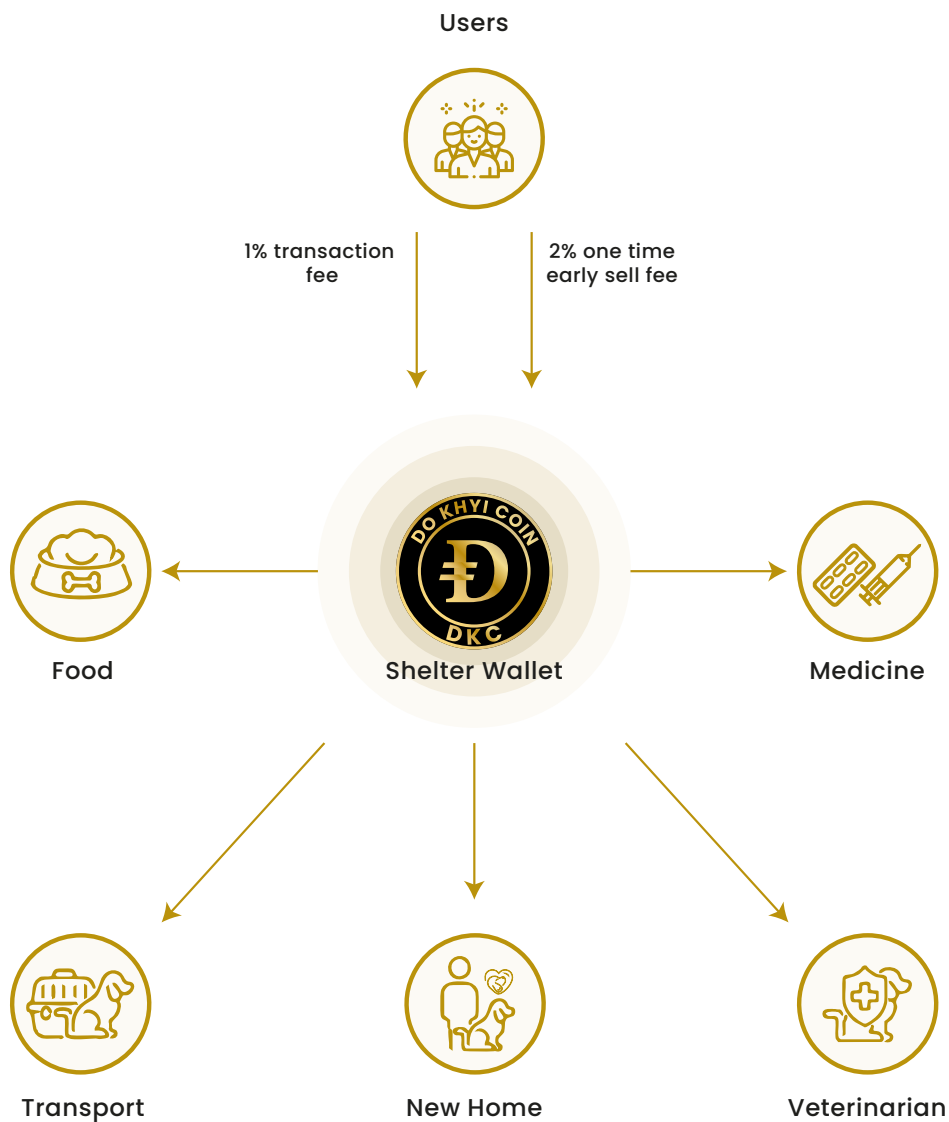

## VISION & MISSION

DKC turns memes into real impact: every transaction delivers verifiable help for shelter dogs. We are building the standardized crypto donations infrastructure for animal shelters on Solana—easy to use, publicly auditable, globally scalable.

While other meme coins chase trends, DKC converts every trade into concrete aid: food, medicine, neutering programs, transport, and emergencies. The mechanism is clear and permanent: a 1% standard fee and a one-time 2% early-sell fee (60 minutes from first purchase) flow 100% to the Shelter Wallet. No yield promises—just hard transparency.

## WHAT DKC STANDS FOR

Like the Do Khyi (Tibetan Mastiff), DKC stands for loyalty, protection, and reliability. In a noisy, volatile market, DKC offers clear rules, fixed tokenomics, and strict separation of funds: shelter funds exclusively for dogs; team funds exclusively for development and operations.

## HOW WE DELIVER

- Transparency first: Public wallets, monthly reports with on-chain links and receipts.
- Simple execution: Fees collected, whenever possible, in USDC so shelters can receive funds quickly in EUR (SEPA).
- Investor-friendly: Fixed supply, locked LP, multisig + timelock, no hidden bags or add-on fees.

## LONG-TERM VISION

DKC becomes the go-to layer for crypto donations to shelters: web widget and API/SDK for partners, easy shop integration, a global network of verified shelters with clear onboarding criteria and reporting duties.

## MEASURABLE MILESTONES (EXAMPLES)

- 12 months: ≥ 50 shelters supported, ≥ €250k total donations, monthly reports without gaps.
- 24 months: ≥ 200 shelters, ≥ €1M total donations, automated receipt workflows (dashboard + IPFS archive).
- Ongoing: LP lock active, audit reports published, admin changes with ≥ 72h timelock.

## TOKENOMICS

|                   |                                                                                       |
|-------------------|---------------------------------------------------------------------------------------|
| Token Name        | DO KHYI COIN                                                                          |
| Token Symbol      |  DKC |
| Token supply      | 1,000,000,000 DKC (fixed)                                                             |
| Accepted Currency | Solana (SOL)                                                                          |
| Trading platform  | Decentralized Exchanges (DEX)                                                         |
| Token Standard    | SPL (pure asset; fees via official DKC Router)                                        |

## TRANSACTION FEES (IMPACT MODEL)

- Standard Fee: 1.0% per transaction → 100% to the Shelter Wallet.
- Early-Sell Fee: +2.0% on sells within 60 minutes from a wallet's first purchase → 100% to the Shelter Wallet.
- Collection Path: via the official DKC Router. For swaps, fees are preferably collected in USDC to simplify fiat conversion for shelters.

Initially, trading will take place exclusively on decentralized exchanges (DEX). Future CEX listings may be considered at a later stage.

## DISTRIBUTION & VESTING MECHANISMS

| GROUP                     | ALLOCATION | VESTING                                                                                     |
|---------------------------|------------|---------------------------------------------------------------------------------------------|
| Market / LP / Circulation | 90%        | Liquidity added at launch; LP tokens locked $\geq$ 6–12 months (link to lock TX).           |
| Shelter Reserve           | 8%         | Multisig treasury for kick-off donations & emergencies.                                     |
| Development & Maintenance | 2%         | 12-month cliff, then 36-month linear vesting; used for audits, infrastructure, development. |

No emissions after genesis. Mint authority will be renounced once configuration is finalized. No hidden wallets, no team airdrops.

## EARLY-SELL PROTECTION

To discourage instant flips without restricting normal trading, DKC applies a single, transparent rule:

- +2% Early-Sell Fee on sells within 60 minutes from the wallet's first-ever DKC buy.
- After 60 minutes for that wallet: only the standard 1% fee remains.
- 100% of both fees always goes to the Shelter Wallet (impact-first).

Note: No tiered 10/30/60-minute tax ladder, and no "fee to LP" mechanics. LP stability is achieved via fair initial liquidity and an LP lock, not via complex fee recycling.

## SECURITY MEASURES & PROTECTION

- LP Integrity: adequate initial liquidity; LP tokens locked for  $\geq 6-12$  months (public lock link).
- Router Security: multisig-controlled upgrades with a  $\geq 72h$  timelock for critical changes and public announcements.
- Wallet Transparency: public mint, Shelter Wallet, Team vesting accounts, and LP lock TX are published on the website/docs.
- No blacklist, except in case of a verified exploit (multisig decision + public notice).
- (Optional) Launch-only max transaction size (24–48h): a temporary MaxTxAmount in the Router (e.g., 0.25–0.50% of total supply per transaction), auto-disabled after the window.

## ROADMAP

### **Q1 2026** PHASE 1: DEVELOPMENT & LAUNCH

- Official website & social channels live
- SPL token mint (fixed supply); mint authority renounced after final checks
- DKC Router (fee collection) deployed & audited
- Initial liquidity added; LP lock published
- Public addresses & policies released (mint, wallets, lock TX, audit link)

### **Q2 2026** PHASE 2: COMMUNITY & ADOPTION

- Live dashboard (24h/30d volume, fees, donations, receipts)
- First 3–10 shelters onboarded (lightweight verification)
- Monthly impact reports (on-chain links + receipts)

### **Q3 2026** PHASE 3: INTEGRATION & TOOLING

- Partner donation widget & SDK (web/shops)
- Additional wallet/DEX integrations
- Second audit/upgrade cycle (as needed)

### **Q4 2026** PHASE 4: SCALE & PARTNERSHIP

- Regional shelter networks; supplier partnerships (food, medicine, logistics)
- Process automation (receipt workflows, IPFS archive)

### **Q1 2027** PHASE 5: GLOBAL IMPACT LAYER

- Broad international shelter network, standardized onboarding & reporting
- Sustained donation volumes with transparent KPIs and public archives

## CONCLUSION

Do Khyi Coin (DKC) is more than a meme coin—it is a simple, transparent engine for real-world impact. Every transaction sends fees to the Shelter Wallet, funding food, medicine, transport, and emergency care for dogs in need. Built on fixed tokenomics, a locked LP, multisig with timelock, and public reporting, DKC turns trading activity into measurable help—without yield promises.

Our long-term vision is clear: a broad international shelter network with standardized onboarding and reporting, sustained donation volumes, and a public archive of receipts and on-chain links. With a focused mission and an accountable design, DKC aims to be the go-to crypto layer for shelter support—action over noise, impact over hype.

## RISKS & CONCERNS

### External Attack Risks

Security threats (exploits, phishing, infrastructure attacks) are a reality in crypto. While DKC uses audits, multisig, timelocks, and best practices, no system is risk-free. Users should follow official links only and verify contract addresses.

### Adoption Risks

We do not guarantee widespread adoption, listings, partner integrations, or donation volume. Community traction and ecosystem support may vary, and objectives may not be met.

### Regulatory Risks

Crypto regulation is evolving. New or changing laws may restrict or impact DKC operations (including fee collection, donations, or fiat conversion) in certain jurisdictions. DKC provides no legal or tax advice; users and partners must comply with local rules.

### Financial Risks

DKC is a volatile cryptoasset. No returns are promised. The token may lose substantial value, become illiquid, or be difficult to trade. There is no guarantee of conversion to fiat or stablecoins at any time. Participants can incur significant losses.

### Operational Risks (Shelter & Process)

Shelter verification, receipt collection, logistics, and emergency handling involve human processes that can fail or delay. DKC mitigates this with public wallets, monthly reports with receipts, and staged disbursements, but cannot eliminate all operational risks.

### Integration Risks (Router & Fiat Bridge)

Fee collection relies on the official DKC Router for swaps and on third-party services (DEXs, wallets, CEXs, banks) for conversions and payouts. Outages, policy changes, or delistings can disrupt operations.
